

# Quiz#3

## SE-5B

**Time: 8 mins**

**Q1#** Write a shell script that:

- First, prompts the user to input two numbers, performs **addition**, **subtraction**, **multiplication**, and **division**, and displays the results.
- Then, asks the user for a filename, checks if the file exists, and if it does, asks if they want to overwrite it or append to it. Based on the user's choice, take input and write it to the file.
- If the user does not want to modify the file, display the current contents of the file.
